

Chat-Mat™

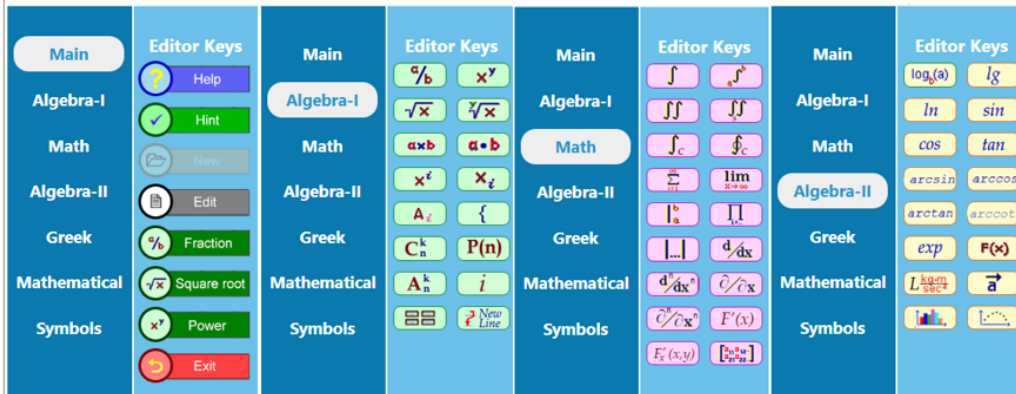

Chat-Mat is a tool that allows you to write down a mathematical expression, past it into a prompt and send it to [ChatGPT](#).

If the expression is an equation, inequality, integral, or any expression that can be solved or calculated, ChatGPT will try to do so;

If the prompt is a verbal question, such as a request for a theorem, formula or history of mathematics, ChatGPT will answer it.

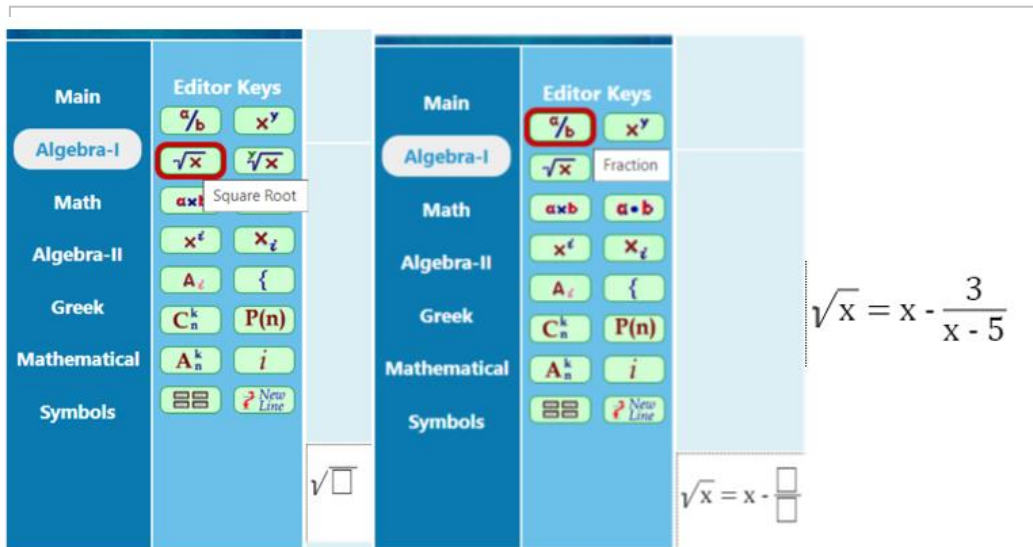

To write down an expression containing special symbols (such as: fraction, root, integral, etc.), you must use the templates found in the "system keys" partitions on the left side of the screen.

For example, Click on [Chat-Mat](#) and see the partitions of system keys:

Using the keyboard keys and the mathematical templates you can write down any mathematical expression, for example:

Finally, press Ctrl+L, click the button , and start writing a prompt. When approaching where a mathematical expression should appear, press Ctrl+V, and the expression will be pasted into the prompt in the format LaTeX required by ChatGPT.

Press Enter, and the answer will appear, for instance:

 **You**
 $\sqrt{x+2}=x-\frac{3}{x-5}$

 **ChatGPT**
 To solve the equation $\sqrt{x+2} = x - \frac{3}{x-5}$, we can follow these steps:

1. Start by isolating the radical term on one side of the equation.

To see examples of possible queries click the button:
